

## ABSTRACT OF THE DISCLOSURE

There is provided a computerized document processing system which allows processing in creating an abstract to be distributed and an original document to be readily modified to relate the abstract with the original document. The computerized document processing system comprises a keyword holding section for holding keywords, document storage means for holding a computerized document transferred via a network, abstract creating means for creating an abstract by extracting at least a character string containing a keyword held in the keyword holding section from the computerized document held in the document storage means, document modifying means for modifying the computerized document such that it can be represented while relating with the abstract created by the document modifying means, and modified document storage means for storing the computerized document modified by the document modifying means. The computerized document processing system presents the abstract created by the abstract creating means and presents the modified computerized document linked to a predetermined portion of the presented abstract by reading it from the modified document storage means in correspondence to a specification made from a user.
